

# Research Grants for PhD students from the China Scholarship Council

Information Form (please read the guidelines carefully on the website [www-csc.utt.fr](http://www-csc.utt.fr))

Supervisor's name :  Given names :

Status (prof., assistant prof., ...) :

Laboratory :  Website address :

Institution :  Website address :

Scientific competence of the supervisor:

- Assistant Professor, French Habilitation to Manage Research Programs (HDR), 98 paper, h-index=38, citations > 5100
- Junior member of « Institut Universitaire de France ». Excellence membership awarded each year to 70 assistant professors under 40 years old across all fields of research (humanities, law, economics, experimental sciences,...)
- "Distinguished Junior Member" of the French Chemical Society (SCF); 2020-2024
- "Junior Award 2020 from the Coordination Chemistry Division" of the French Chemical Society (SCF)

Two major publications in the field proposed for the PhD :

1.

Title :

Subject :

The association of metallic ions and organic ligands through coordination chemistry techniques is a very efficient route to design multidimensional edifices. The organic ligands can act as linkers and organizers of the metallic ions at a molecular level and can afford a rich variety of compounds with either zero, 1, 2 or 3 dimensional architectures. Our group develops an intense activity in this area in order to afford tri-dimensional metal-organic frameworks or isolated molecules. These compounds are multifunctional as they present both luminescent and magnetic properties. The aim of this PhD project is to construct new multifunctional molecular edifices. First, their synthesis will be deeply investigated using conventional or unconventional (hydrothermal or microwave synthesis, sonocrystallization,...) methods. Then, they will be characterized either structurally (powder and single crystal XRD) and thermally (TDXD, TGA/TDA). Finally, significant efforts will be made to undergo their fine physical characterization. Their luminescence properties (luminance, quantum yield, life time...) will be deeply investigated, together with their magnetic properties. Special efforts will be made to investigate their magnetic slow relaxation and to characterize their possible single-molecule magnet properties (dc and ac magnetometry)

Keywords :

Expected collaborations :

Background required from the applicant :

Existence of a PDF file detailing the proposal ("yes" or "no") :

(see guidelines on the website [www-csc.utt.fr](http://www-csc.utt.fr))
